

Ene Mecó

emeco@uic.edu ❖ (312) 907-7195 ❖ Chicago, Illinois

SUMMARY

Electrical and Computer Engineering PhD student specializing in Machine Learning and Signal Processing, with a top-ranked academic background. Research experience includes deep learning for environmental prediction and signal processing for weak signal detection, alongside industry work on AI systems.

EDUCATION

University of Illinois Chicago <i>PhD Electrical and Computer Engineering</i>	January 2026- January 2030 <i>Chicago, Illinois</i>
▪ GPA: 4.0	
Sorbonne University - Faculty of Science and Engineering <i>BS Major in Electrical Engineering/ Minor in Computer Science</i>	2022-2025 <i>Paris, France</i>
▪ GPA: 19.04/20 – Top-ranked student, Highly Honorable with Praise	
University of Chicago <i>Exchange Program</i>	2024-2025 <i>Chicago, Illinois</i>
▪ Data Science & Machine Learning	
▪ GPA: 4.0	

WORK EXPERIENCE

IDEAL Summer Research <i>Northwestern University</i>	June-August 2026 <i>Evanston, Illinois</i>
▪ Research under Professor Ermin Wei: Mixed Autonomy System & Game Theory	
▪ Single-agent Poisoning Attacks in a Multi-Agent Learning environment using Deep Learning	
Research and Teaching Assistant <i>University of Illinois Chicago</i>	January 2026- <i>Chicago, Illinois</i>
▪ Research Assistant under Professor Enis Cetin: Wildfire Prediction with UNet-s	
▪ Teaching Assistant: ECE115 Labs - Introduction to Electrical and Computer Engineering	
Software Engineer & Software Engineering Team Lead <i>Full-time - Abisnet</i>	July-December 2025 <i>Tirana, Albania</i>
▪ Developed a custom internal AI agent trained on proprietary company data using a vector database	
Spectral analysis on FPGA board for the detection of astrophysical signals <i>Internship Paris Observatory PSL</i>	June-July 2024 <i>Paris, France</i>
▪ Python-based FFT signal processing on Red Pitaya for weak astrophysical signal detection	

PROJECTS

▪ AI Agent for Murlan (Self-Play Reinforcement Learning) Designed an RL environment and trained a self-play PPO agent with a policy–value network and legal-action masking for a multi-agent (4) Albanian card game	December 2025
▪ Unveiling Regional Dynamics: A Comparative Study of Balkan Countries in 2023 Unsupervised Learning techniques (PCA, k-means) to profile Balkan countries based on their characteristics.	March 2025
▪ Heart Rate Monitor Circuit Using OrCAD PSpice to simulate the analog and digital parts of the circuit. Using Raspberry PI to acquire data from the circuit and process them to get the BPM value.	April 2024

SKILLS & LANGUAGES

▪ Skills: -Data Science/ML: Machine Learning, Deep Learning, PyTorch, Scikit-learn, Pandas -Programming: Python, C, Java, Assembly, SQL, R, MATLAB (Simulink) -Electronics: Analog and Digital Electronics, Optoelectronics, PCB Design & Soldering, KiCAD, ADC & DAC, TINA-TI, Arduino, PLC, Eagle Autodesk, OrCAD PSpice, VHDL, FPGA, AutoCAD	
▪ Languages: English, French, Albanian
